

TaskWhiz

An interactive Task orchestration tool for efficient
productivity tracking

MANAGING YOUR TIME...

Why?

Task management has become one of the most pressing issues in a student's life. Be it the constant procrastination of assignments and projects or the never ending registrations, students tend to lose track of what needs to be done and succumb to their memory only to lose out on important activities.

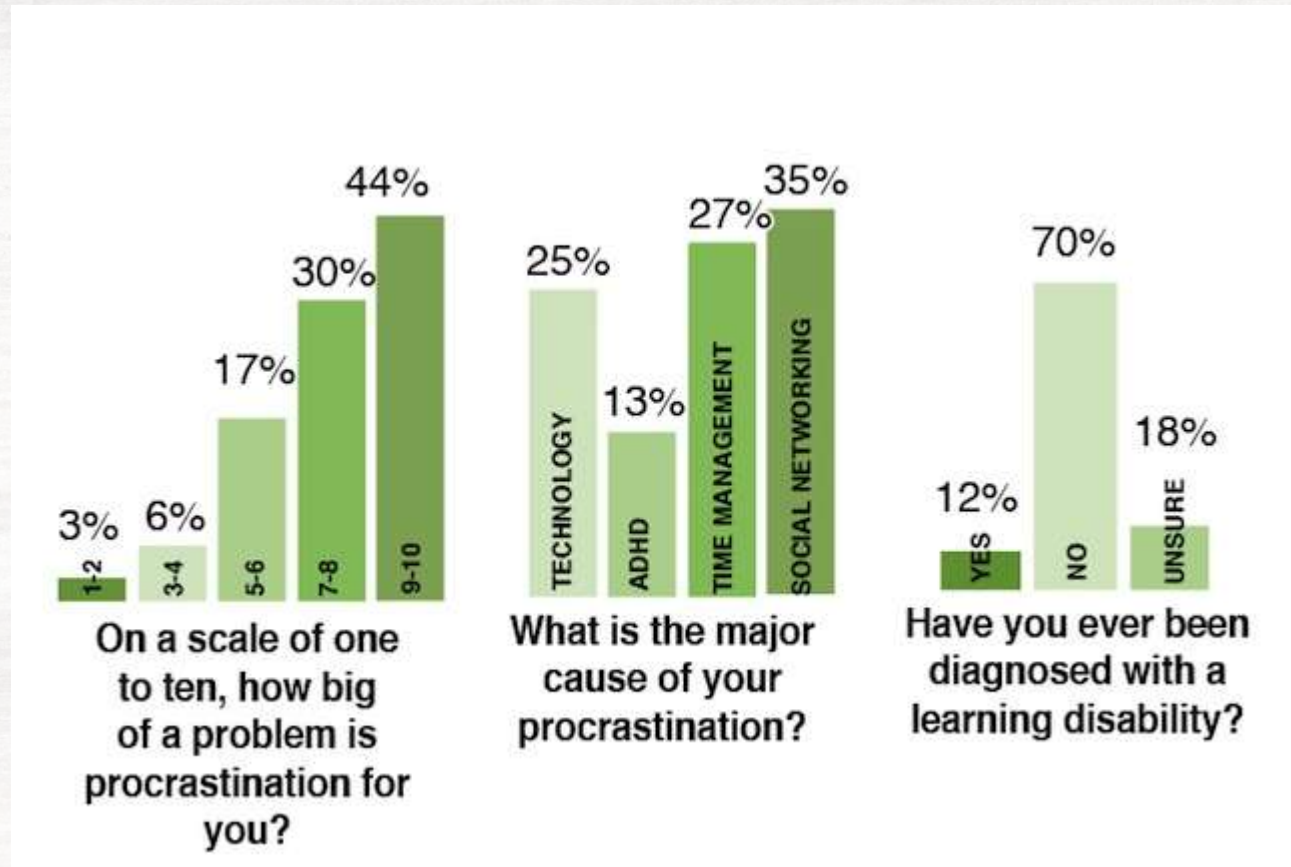

Also, having a proper sleep schedule or efficiently managing time to has proven to be a herculean task thereby reducing total productivity of students.

Task management systems are used to manage tasks, track time, and easily collaborate with the team. These are efficient for individuals, teams, and organizations to help them complete tasks efficiently without missing any deadlines.

We aim to fulfil the following:

- ✓ Make Task prioritization easier
- ✓ Access event data from anywhere anytime
 - ✓ Bird's eye view of all the tasks
 - ✓ Notifies/alerts about overdue tasks
 - ✓ Recurring tasks creation
- ✓ Track time spent on assignments/activities
 - ✓ Therefore boost productivity

According to most of the surveys, students resort to procrastination due to poor time management skills and overuse of social media

Let us look at a real time example

It is a typical Monday. Anna has a marketing class from 9:30–11:20 AM, then a 1-hour break before her finance class from 12:20–2:30 PM. She has a deadline to submit the marketing assignment on Thursday at 8 pm and she has a finance test on the same day at 1 pm. She had 2 days to prepare for both amidst attending 3 seminars scheduled at different locations and also attend an important gathering on Wednesday at 6. She needs to efficiently manage her sleep and ensure that she meets the deadlines on time. She has a lot on her mind and needs help keeping track of everything.

What we propose:

She needs to input all her tasks in the TaskWhiz app.

This will keep track of her schedule and allow her to squeeze time for preparing and managing the test and submission.

She will be constantly notified about the remaining tasks and the amount she's completed with badges for efficiency.

The recurring event option makes sure that If the alarm was set for 6 am on Monday, be repeated for the rest of the days too.

She can keep the app updated and ensure that she doesn't miss out on anything.

An empathy map to showcase the needs
