High-fidelity prototype

High-fidelity prototypes are computer-based, and usually allow realistic (mouse-keyboard,phone touch screen) user interactions. High-fidelity prototypes take you as close as possible to a true representation of the user interface.

Quiz Ans

Human Computer Interaction

The heuristic-systematic model of information processing, or HSM, is a widely recognized communication model by Shelly Chaiken that attempts to explain how people receive and process persuasive messages. The model states that individuals can process messages in one of two ways: heuristically or systematically.
